

ZEYU ZHOU

Tel: +852 69057254 | Email: wwwzzy1@connect.hku.hk Address: 33 Pokfulam Road 3/F, Hong Kong SAR

EDUCATION

The University of Hong Kong

HKU Business School, GPA: 3.58/4.30

Hong Kong, CN

Sept 2020 – Nov 2022

- Master of Science in Business Analytics
- Y2 Capital - Capstone project Lead: Led 8 team members to predict stock performance and constructed portfolios based on the prediction and implemented back-testing using machine learning models like XGBoost, SVM, LSTM, etc.

China Agricultural University

Bachelor of Arts, Bachelor of Science, GPA: 3.35/4.00

Beijing, CN

Sept 2016 – June 2020

- Double Major: English, Mathematics and Applied Mathematics
- Major courses: Mathematical Analysis, Linear Algebra, Real Variable Function Theory, ODE, Fuzzy Math
- Mathematical Modeling Contest – Team Lead: Optimized the stochastic model to recommend 15K users under budget recipes based on food price and nutrition composition

SKILLS AND LANGUAGE

- Data collection, cleaning, analysis, and visualization: Python, R, SQL, Power BI, Excel VBA, Selenium
- AI/LLM tools: Azure OpenAI, LangGraph, Copilot, Cursor, n8n, Replit, Crawl4AI
- Web development: JavaScript, React, Node.js, MongoDB, Git
- Statistical and machine learning: Stochastic modeling, Regression, XGBoost, SVM, causal inference
- Deep learning and NLP: BERT, CNN, RNN, LSTM, PyTorch; sentiment analysis
- Languages: Chinese (Native), Cantonese (Fluent), English (Professional working proficiency); IELTS 7.5; GRE: Verbal 153, Quantitative 170

EXPERIENCE

The University of Hong Kong

Data Manager and AI Specialist

Hong Kong, CN

Aug 2022 – Present

- Full-Stack Platform Development & System Integration
 - **Developed an internal data and service platform comprising:** (1) a real-time career-coach booking system, (2) an attendance analytics system integrated via external SDKs and APIs, and (3) AI agents powering chatbots for students and career coaches to interact with profile data, resume databases, and job opportunities. Built as a web solution with Node.js and Flask backends
 - **Scaled CV review services with GPT-4.1 Vision and Python-based context** to evaluate 24 professional standards across contact information, formatting, and content quality. Processed 3,000+ CV submissions in batch and automatically generated personalized feedback emails, reducing manual review time by 80% while maintaining professional quality standards
- Advanced Analytics & Business Intelligence
 - **Built interactive Power BI dashboards** for admissions and marketing, providing real-time insights into enrollment trends, performance metrics, and campaign ROI
 - **Applied machine learning models** (linear regression, random forest, XGBoost, SVM) with **causal-effect analysis** and interpretability methods to identify characteristics influencing student decisions; recommendations improved marketing and admissions campaign effectiveness by 20%
- Data Warehouse Architecture & Data Collection
 - **Designed and implemented a centralized data warehouse** integrating data from admissions, career development, marketing, and student enrichment. Developed ETL pipelines and key SQL queries to automate daily reports, reducing manual reporting time by 60%
 - **Established external data-collection pipelines** for market intelligence, career trends, and university benchmarking. Used Selenium and Crawl4AI to gather LinkedIn profile data, salary information, and competitive insights from 4000+ users to support strategy of career development
- Process Automation & Workflow Optimization
 - **Built automated workflow solutions using Selenium** to streamline internal table and report submissions, reducing manual handling and improving compliance with data-privacy requirements. Created an automation suite including auto-enrollment, PDF merging, and redaction with OCR for sensitive materials

China Industrial Securities Capital Management Limited

Shanghai, CN

Private Equity Investment Division, Biological medicine & Medical equipment Team Intern

Dec 2021 – Apr 2022

- Researched the development trend of gene diagnosis industry and companies' product systems, competitive advantages, and summarized notes of management and customers from the previous 10 years of financial data
- Searched for equity investment return rate of more than 300 Bio-tech companies in Chinese and Hong Kong markets
- Built the company's financial model using 3 years of historical financial report data to evaluate the market price of the company and its competitors

Ernst & Young Advisory Services Limited

Hong Kong, CN

Consulting Internship

July 2021 – Oct 2021

- Developed a SQL and VBA parsing tool for a risk management project of an HK commercial bank to generate over 20 data lineage reports of HKMA banking returns and facilitated the process of data migration to a graphical database using Neo4j
- Organized 2-month's performance progress decks for project content and progress demonstration, formed feedback lists for clients' check, and revised the system requirement documents, feasibility study reports, and other deliverables accordingly

RESEARCH EXPERIENCE

The University of Hong Kong

Hong Kong, CN

Research Assistant on Hong Kong emergency department wait times and rostering problem

July 2021 – Apr 2024

- Standardized 3million data entity format for emergency department to improve the wait times efficiency for simulation study and conducted regression analysis to uncover the correlation between waiting time and patient flow, identifying key factors affecting waiting time. Found that for every 10-minute increase in waiting time, patient flow decreased by approximately 5%
- Assisted in developing and optimizing the physician scheduling algorithm for the emergency department, which increased resource utilization efficiency by 15% and reduced the average patient waiting time by 20 minutes
- Collaborated with the medical team to design and implement a data-driven decision support system, enabling managers to monitor and adjust physician schedules in real-time. After system implementation, patient satisfaction in the emergency department increased by 12%

Research Assistant on factors to Douban scores of Chinese TV series

Apr 2021 – May 2021

- Analyzed 200+ Chinese TV plays information data using open-source API and emotion dictionaries to score the emotion polarity of Douban reviews
- Predicted the influence of sentiment and cast on scores of Chinese TV series based on the comparison results of Linear Regression, Random Forest, and XGBoost models
